Chemical Weathering Worksheet

This worksheet accompanies slide 4 of *Chemical Weathering.ppt*

Which type of weathering?

Look around your environment and see if you can find ten examples of weathered rock. You could look at statues or gravestones, your house, your school or any other buildings you find. Record your observations about the weathered rock in the table below, highlighting where you found the weathering, what you think caused it and what effect it has had. Remember that weathering can be caused by wind, rain, hot and cold weather, plants and animals.

	Location	What caused the weathering?	What effect has it had?
e.g.	A wall in the school playground.	Water dripping from leaky guttering.	A channel has been worn in the bricks where the water has run down.
